

VOLUMETRIC DOSER

Pneumatically dosing machine with syringe for the filling of any type of cream or gel.

Constructed in stainless steel (AISI 316 L on request) with Tri Clamp attacks for an easy and sure cleaning of all parts in with the product.

It is very easy to adjust the dosage and it is also possible to set the working time by two micro-metrically valves that control the pressure in aspiration and in dosing in relation to the product density to fill into pots or tubes.

Machine can be fit with a 6 or 25 stainless steel hopper.

Machine is equipped with a dosing piston from 10 up to 250 cc. By request it is available the piston from 20 up to 700 cc.

As optional it is possible supply drop safe system and silenced compressor.
